

# DynaCash™

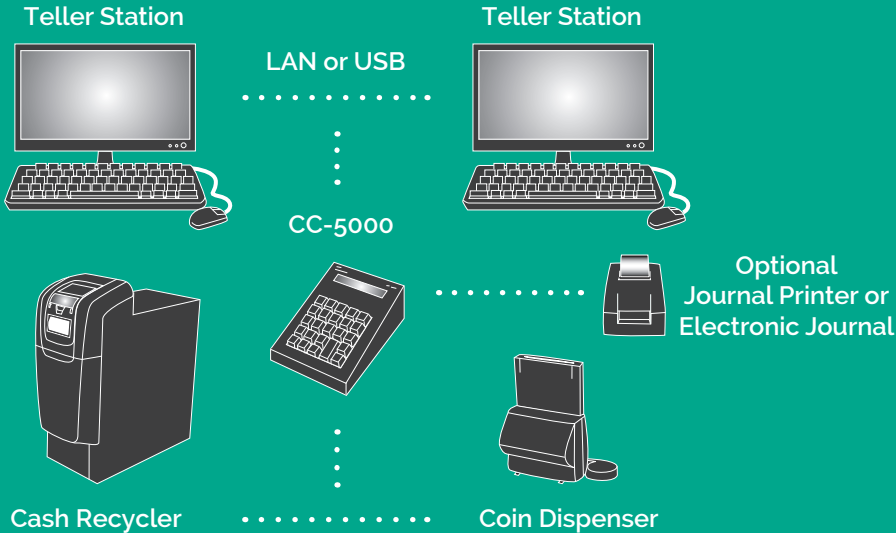

DynaCash integrates all major brands of teller cash recyclers and teller applications.

Thousands of DynaCash systems are currently in use. DynaCash is easily installed in less than a day.

# How it Works

DynaCash™ streamlines your Cash Automation process.

- Primary tellers work at their PC and use “hot keys” to execute transactions, while secondary tellers use the CC-5000 for Buy/Sell transactions.
- Cash denominations and amounts are automatically entered into teller application screens.
- CC-5000 Terminal serves management functions without interrupting tellers.
- Compatible with traditional IT environments as well as thin client/remote server networks.
- Multiple security levels to control access.
- Recycler activity and manager actions are recorded to Electronic Journal, Journal Printer or both.
