DynaCore™

DynaCore™ Cash-to-Core Automation

The beauty behind Teller Cash Recycler (TCR) technology is its ability to run transactions efficiently, accurately, and securely. DynaCore™ was built with this in mind. It allows you to utilize all the great features that your TCR investment has to offer. It works alongside your staff to ensure comprehensive financial services are automated. It maps the commands to-and-from the TCR and the teller application to save time and avoid double keying. DynaCore™ is simple to use, allowing you to **manage exception conditions** such as vault buying and selling. It is intuative for branch staff training and use — making it a perfect solution when transitioning to the Universal Banker model.

DynaCore™

Powered by DynaCash, DynaCore is the next evolution of the leading TCR software.

The DynaCore™ Application

Multiple User Control

As financial institutions make the shift to Universal Banking, DynaCore™ becomes a critical component to ensure the cash automation equipment provides the accuracy and efficiency needed to support the Universal Banking flow. With multiple user control and transaction booking, as many as six users can be assigned to one TCR while avoiding overlapped transactions.

Simple Interface

No need to toggle through platforms to fulfill every transaction. The user can manage manual transactions, buy/sell vault transactions, inventory management, generate reports, and more through one simple screen. The application even allows for auditing of transaction totals over all periods of time.
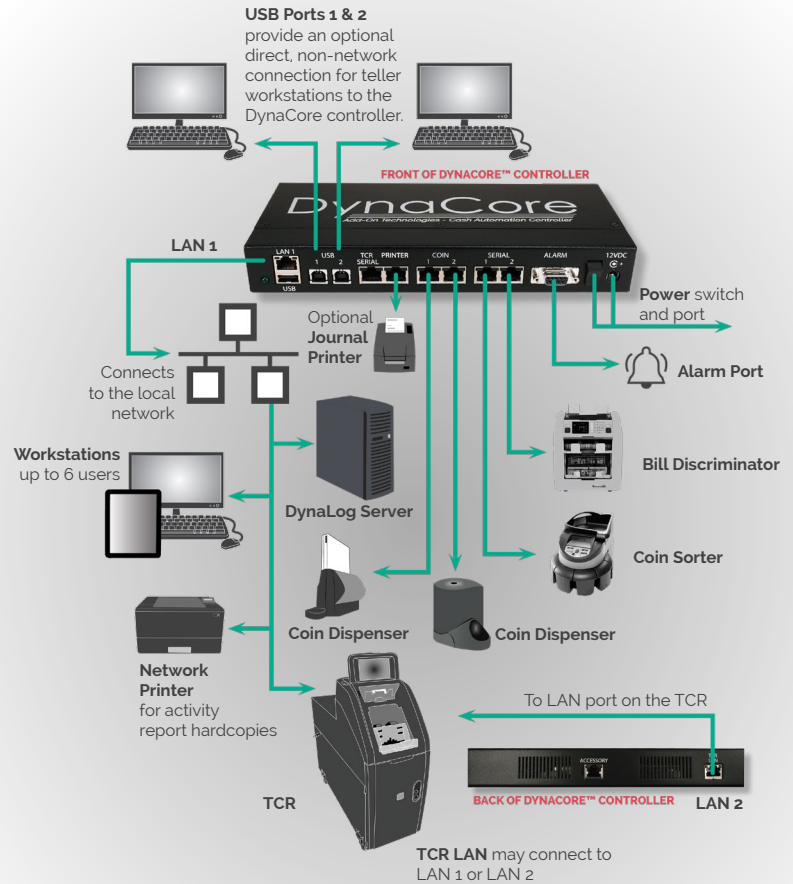

Teller Cash Recycler

Having the most advanced interface in-place to connect the Teller, TCR, banking core, and other peripheral technology is essential. The heavy lifting of the transaction relies on how easily it all connects or interfaces to process the exchange efficiently.

Peripheral Equipment

It's not just about the TCR — DynaCore™ interfaces with other types of banking equipment to facilitate efficiency and ease of use. This includes bill discriminators, electronic journal, coin dispenser and sorters.

DynaCore™ Schematic

USB Ports 1 & 2 provide an optional direct, non-network connection for teller workstations to the DynaCore controller.

FRONT OF DYNACORE™ CONTROLLER

LAN 1

Connects to the local network

Optional **Journal Printer**

Power switch and port

Alarm Port

Workstations up to 6 users

DynaLog Server

Bill Discriminator

Coin Sorter

Coin Dispenser   **Coin Dispenser**

Network Printer for activity report hardcopies

To LAN port on the TCR

TCR

BACK OF DYNACORE™ CONTROLLER   **LAN 2**

TCR LAN may connect to LAN 1 or LAN 2

How it Works

- One console - up to six concurrent online teller workstations.

- Microsoft™ Active Directory OR locally-controlled user permissions administration.

- 15 customizable roles.

- Full support for advanced TCR features.

- The Recycler activity and manager actions are recorded to the Electronic Journal, and can be printed to an optional Journal/Network Printer.
