

Manage More. Deploy Faster. Eliminate On-Site Updates.

DynaAdmin is centralized management solution that enables banks and credit unions to remotely update and configure their entire fleet of DynaCore™ Controllers —from a single IT workstation on the internal network.

What Can You Do?

DynaAdmin provides centralized control for DynaCore™ Controllers within the same domain or organization, supporting:

- Firmware version updates
- Subscription code deployment
- Group settings configuration
- Inventory control settings
- Security policy updates
- Network configuration changes

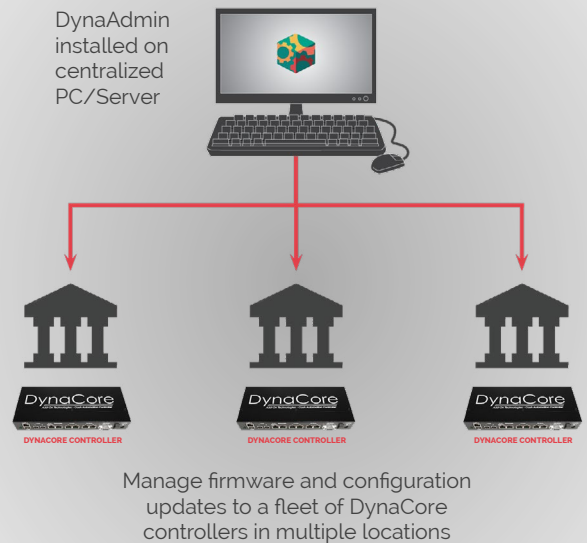

Built For Financial Institutions

DynaAdmin is designed for bank and credit unions IT professionals who manage distributed infrastructure. It delivers a familiar, scalable management model—without requiring specialized field deployments or manual intervention.

Key Benefits

- Centralized remote management
- Fleet-wide updates form one location
- Faster rollout of new features
- Less reliance on on-site service visits
- Ideal for multi-branch environments

DynaAdmin Schematic

How it Works

- Install DynaAdmin on an IT administrator PC (typically at the headquarters)
- Connect securely to all DynaCore™ controllers on the network.
- Deploy updates and configurations to multiple branch locations simultaneously.
- This centralized architecture ensures consistency, reduces downtime and minimizes disruption to branch operations.
